The big tree area of Drumtochty glen will be managed under LISS in order to maintain its character. Coupe shape and scale has been designed to fit in with the landscape character, for example the large hillsides of Drumtochty have similar sized coupes, whereas glens and gullies such as the Cowie, Finglennie and Bervie will have more considerate smaller coupe design. The latter will have a positive impact on water catchment and flooding.

Diseased pine will continue to be removed on an infection level basis.

Long term retention for biodiversity, landscaping but ultimately production.

Scheduled monument areas to be maintained as open.

Natural reserves maintained for biodiversity.

Only the most appropriate sites have been designated LISS.

A number of new roads are required in order to manage the forest into the future.

Midhill wind farm has planning permission from Aberdeenshire council APP/2003/1662.

Norway Spruce to be felled due to it blowing into the Cowie.
