Declaration by FLS as an Operator. All timber arising from the FLS National Forests and Land represents a negligible risk under EUTR (No 995/210).

Montane heath mosaic of upland heath with low density group planting of willows, scots pine, dwarf birch and scrub species - 400-600 stems/ha 70% open space. Decreased herbivore pressure should improve natural regeneration of site adapted species, creating a more natural mosaic of open and wooded habitats.

Peatland and wet open habitats mosaic on and around Hunt Hill with some bog fringe shrub and tree species planted at low density such as, willows, scots pine, dwarf birch - approx 400 stems/ha 60% open space. Peatland restoration and drain blocking to restore ground water is a significant feature in this part of the site.

Area 5 Hunt Hill
