In order to conserve this nationally important habitat and extend its local network, it is the intention of Forestry and Land Scotland to restore 4.88 Ha of coupe 41 by the following methods over time:

1. Block drains to re-wet the soil.
2. Prevent and remove regeneration over coming years.

1.2 Ha of native mixed broadleaves will still be planted on areas of mineral soil.

All operations will be carried out according to UK Forestry Standard Best Practice as well as other relevant guidance such as Water, Soil, Biodiversity and Historic Environment.
