

Historic environment (see Appendix II)

Scale @ A3: 1:20,000

Date: 25/06/2026

0 0.125 0.25 0.5 0.75 1 Km

-  Forest Roads
-  Drains and watercourses
-  Heritage features
-  Management coupes

Designated historic assets (1 and 2) will be actively managed with regen removed from relevant features and marked out and protected during forestry operations. Where the forest is managed under clearfell and restocking, an unplanted 20 m buffer zone around relevant features will be maintained where possible; and where the forest is managed under LISS, opportunities to open up relevant features will be considered during thinning operations (see Maps 4 and 6). The proposed restocking in Coupe 59124 will require particular care as it lies within the scheduled area. This will require Scheduled Monument Clearance and early liaison with Historic Environment Scotland. The Polish Camp will be retained within open ground, while the surrounding scheduled area will be managed under LISS (NB: no thinning is planned within this LMP period).

Significant heritage features (6) will be actively managed with regen removed from relevant features and marked out and protected during forestry operations.

Relevant **heritage features** (3, 4 and 5) (using information held in *Forester Web Heritage Data* and associated archaeological reports) will be marked out and protected during forestry operations.
