

Coupe previously under LISS management. This is now a clearfell coupe as the research trial has ended.

There is a weight and volume restriction on this section of public road. Consultation will take place with Moray council road engineers before any harvesting operation is undertaken.

Adjacency between coupes is unavoidable due to coupes felled after DNB infection.

Hilltop to be felled in first phase to fit wider landscape.

Phase three coupe that will be restocked with 12ha of broadleaves as the site conditions are more favourable. This along with 2.7ha of open ground will allow this plan area to meet minimum UKFS standards for broadleaves and open space within a woodland.

Phase	Years	Volume from thinning and clearfell (m ³ / year)
1	2020 - 2024	4440
2	2025 - 2029	4788

Scotland's National Forest Estate is responsibly managed to the UK Woodland Assurance Standard.
