Pacific silver fir with nurse species (downy birch or common alder). Blocky mix, minimum group size of 49 trees (7 x 7).

Native shrub mix interlaced with designed open space to maintain the view of the viaduct from Glenbuck Heritage Village. Species mix consists of hazel, hawthorn, rowan, willow, guelder rose, elder, blackthorn, crab apple and holly.

Any new deer fences erected on site will have black grouse markers to minimise the risk of bird strike. Rabbit netting will be fitted to all new fences to improve protection against rabbits and hares.

Native montane mix of downy birch, rowan, willow and common alder on steep, rocky mining spoil.

Very low density native broadleaf mosaic consisting of patches of willow, alder, hawthorn, blackthorn and hazel. Stocking will be feathered with lowest densities immediately adjacent to the SPA/SSSI.

New native wet woodland in riparian corridors. Alder, birch and willow with 50% open ground.

Native broadleaf buffer to be established along the south-eastern boundary of the site. This will help to minimise any potential negative effects on adjacent breeding birds and improve habitat connectivity.

Scots pine with nurse species (downy birch). Blocky mix, minimum group size of 49 trees (7 x 7).

Macedonian pine with nurse species (downy birch). Blocky mix, minimum group size of 49 trees (7 x 7).

Norway spruce intimately mixed with nurse species (downy birch or common alder).

Sitka spruce intimately mixed with nurse species (common alder or Lodgepole pine).

Native broadleaf mix consisting of downy birch, rowan, hawthorn, alder and hazel.
