

East region

Castlehill and Balnacoul land management plan

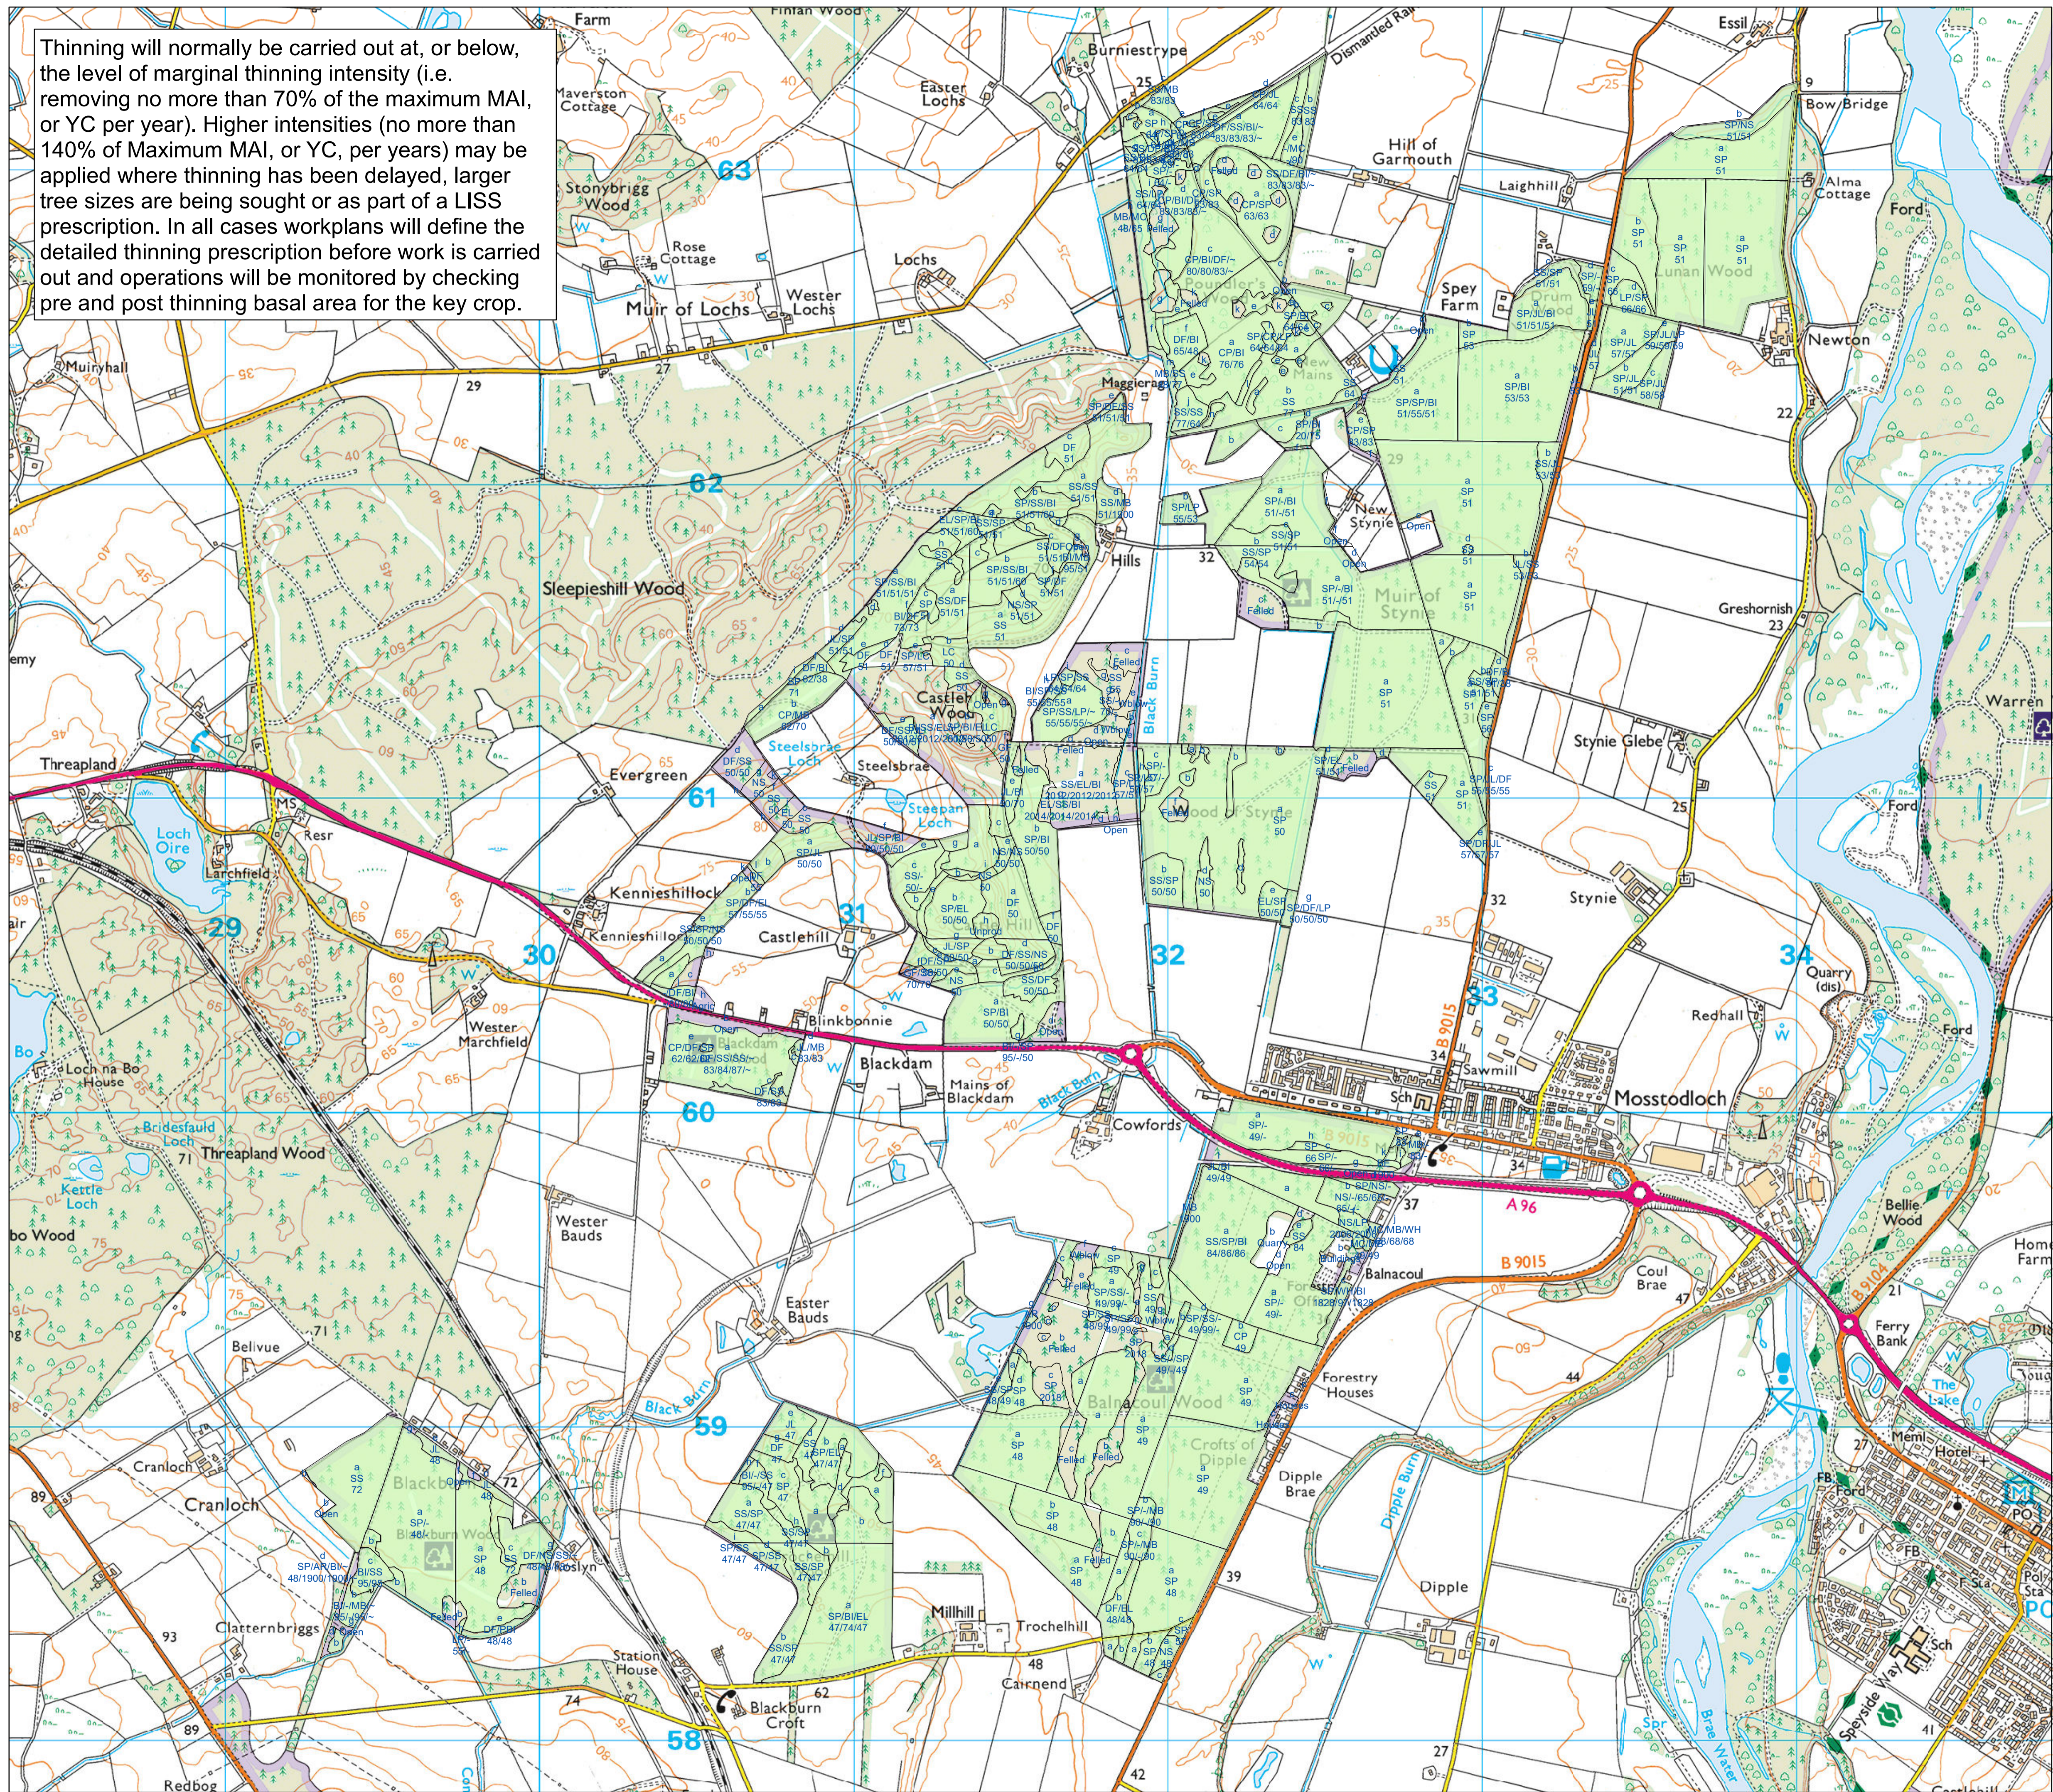

Map 6 Thinning

Scale 1:10,000 @ A1

Date August 2019

 Thinning area

Thinning will normally be carried out at, or below, the level of marginal thinning intensity (i.e. removing no more than 70% of the maximum MAI, or YC per year). Higher intensities (no more than 140% of Maximum MAI, or YC, per years) may be applied where thinning has been delayed, larger tree sizes are being sought or as part of a LISS prescription. In all cases workplans will define the detailed thinning prescription before work is carried out and operations will be monitored by checking pre and post thinning basal area for the key crop.
