

**West Strathyre  
Land Management Plan**

**M11: Continuous Cover  
Forestry Suitability**

**Legend**

 Land Management Plan area

**Areas suitable for CCF**

 No surveyed constraints.  
Exposure, soil type & slope  
all optimal

 Exposure & soil type optimal but  
significant slope constraint.

Note: Crop characteristics not considered  
in this element of the CCF assessment.

Acronyms:  
CCF: Continuous Cover Forestry

Scale: 1:35,000 @ A3

While slopes constrain CCF management and lower returns from harvesting, steep slopes are key areas in terms of landscape impact & slope stability. There is therefore a less easily measured eco-system service delivery from CCF on steep slopes. A good and relatively closely spaced road network, while initially expensive, can reduce the adverse impacts of slopes on practical harvesting management.
