

In order to conserve this nationally important habitat and extend its local network, it is the intention of Forestry and Land Scotland to deforest the majority of the site by the following methods over time:

1. Harvest and extract timber to roadside areas where ground conditions, brush availability and economics allow in the period 2027/28.
2. Where and when economics allow, mulch onsite or fell to waste (Where ground conditions and/or brush availability prohibit extraction) and block drains to re-wet the soil.
3. If appropriate, encourage areas already succumbing to wind-throw to further blow with removed protection and ground wetting by drain blocking.
4. Prevent and remove regeneration over coming years.

All operations will be carried out according to UK Forestry Standard Best Practice as well as other relevant guidance such as Water, Soil, Biodiversity and Historic Environment.
