

Coupes previously managed under CCF are highlighted in purple.

Red highlighted coupes have been changed to Clearfell due to their unsuitability for further thinning ( eg : due to risk of windblow)

Thinning coupes highlighted in green include thinning coupes that will be managed with normal marginal intensity, as well as thinning coupes where the focus will be on felling larch and minimal removal of other species

Selective thinning coupe highlighted in orange include coupe where higher thinning intensity may be required or where stable seed trees only will be retained
