

**We will work with SSE and SNH to resolve any resilience issues that arise in connection with mature broadleaves within the SAC impacting on the integrity of the powerline.**

**Conversion to native woodland will remove any landscaping issues, reduce slope stability and soil erosion concerns. We will inform our forest neighbour of our proposals so that they can take these into consideration when revising their own plan.**

**We will work with SNH to implement an agreed management plan for the SAC, when this is finalised.**

**We will construct a forest road to access the proposed Phase 2 felling coupe closer to the time when this will take place. All conifers within the SAC will be removed at the same time. Operations may be brought forward if significant windblow occurs.**

Scotland's National Forest Estate is responsibly managed to the UK Woodland Assurance Standard.
