

Aultmore Forest Design Plan

Map 5 Management

Scale : 1:15,000 @ A1

Date : March 2013

Some natural regeneration of Sitka spruce, Lodgepole pine and Japanese larch has appeared. This will be surveyed as per FMM4 requirements. If insufficient trees are present the natural regeneration may be enhanced with planting if the objectives of the coupe require this.

Most areas of larch that show a degree of stability against windblow will be retained for as long as possible to give some structural diversity.

All the phase 1 felling coupes are to remove Lodgepole pine with DNB infection. Other coupes will be retained as long as possible given other potential constraints.
