

Peatland Restoration: restore deep peat and priority habitats.

Water: enhance the riparian network with high density native broadleaf planting, protect private and commercial water supply points and pipelines.

Capercaillie and Black Grouse: enhancement of historic Capercaillie and Black Grouse leks in the LMP area will be a by product of peatland and riparian habitat restoration.

Plant Health: management to enhance plant health and to minimise the impact of existing Dothistroma Needle Blight (DNB) via targeted thinning and monitoring of potential *Phytophthora ramorum* vulnerable crops on timber production.

Rothes III Windfarm: facilitate the development of Rothes III windfarm via selective felling.

Zone Boundary: the LMP area has been split into two zones, environmental (to the north) and timber production (to the south). This allows us to align our operations to our objectives.

Recreation: maintain public access within the LMP area.

Quarry: expansion of existing quarry to facilitate proposed forestry operations and windfarm development.

Timber: production of high-quality timber within targeted location based on site conditions with no additional input (e.g. fertiliser and additional drainage).
